

Cloud Based Inventory System

Project Proposal

A proposed, custom-built ERP for your perfume & cosmetics business — retail, wholesale and e-commerce, in one platform.

Project Overview

Understanding the business we're building for

3,000+

SKUs across every vendor

5

sales channels — Shopify, WooCommerce, eBay, TikTok Shop & Whatnot

3-in-1

Retail, wholesale & e-commerce, one platform

About The Business

- Perfume & cosmetics retailer running retail, wholesale & e-commerce
- 3,000+ SKUs sourced across multiple vendors, with tier-based pricing
- Sells through Shopify, WooCommerce, eBay, TikTok Shop & Whatnot
- An active reseller network with negotiated wholesale terms

What Success Looks Like

- A centralized platform — not just a like-for-like ERP swap
- A long-term partner for growth & digital transformation
- Real-time inventory across every store, warehouse & channel
- Data-driven purchasing in place of manual spreadsheet review

Nine modules address these needs directly — grouped into phases on the next page.

Our Approach

A custom-built platform, delivered in manageable phases

1

Custom Built for You

A system designed around how your business actually works today — not a rigid off-the-shelf template.

2

Modular by Design

9 modules, but not independent — some are foundational, others build on top. We map the dependencies so you know exactly what unlocks what.

3

Start Small, Scale Fast

We begin with a focused MVP so you're live quickly, then grow the platform with you.

Nine modules are proposed on the following pages — with a recommended starting point (MVP) highlighted for our first working session with you.

Project Phases

Nine modules, grouped into three delivery phases

PHASE 1

Foundational operations — setup, inventory, POS & purchasing

- 1 Core Setup
- 2 Product & Inventory
- 3 Retail POS
- 4 Purchasing & Vendors

PHASE 2

Expand reach — wholesale, online channels & reporting

- 5 Wholesale & B2B Portal
- 6 E-Commerce Hub
- 7 Reports & Dashboards

PHASE 3

Advanced intelligence & finance

- ★ Smart Demand Forecasting (flagship)
- 9 Accounting & Finance

★ Even though it lands in Phase 3, Smart Demand Forecasting is our flagship recommendation — see why on page 7.

Where We Recommend Starting

Four foundational modules, in build order — each is either needed by, or best sequenced right after, the one before it.

These 4 modules cover the essentials of daily operations — setup, inventory, in-store selling and purchasing. See how they and the rest of the platform connect on the next page.

How The Modules Connect

Every module maps to what it needs beneath it — this is the full dependency chain

Because Smart Demand Forecasting needs both Inventory and channel data, it can only run once those are in place — that's why we call it out as the flagship feature on the next page.

★ FLAGSHIP FEATURE

What Is Smart Demand Forecasting?

The single highest-impact module in this proposal — it directly replaces your biggest operational gap today.

Why it matters:

Today, management manually reviews 30/60/90-day sales in Excel to decide what to reorder. This module automates that entirely — turning hours of spreadsheet work into an always-on, data-driven recommendation.

30/60/90

day sales trend windows, analyzed automatically

3,000+

SKUs continuously tracked for demand signals

Zero

manual spreadsheet review needed each month

- Analyzes historical sales to predict future demand
- Recommends what to reorder, how much & when
- Flags fast-moving, slow-moving & dead stock automatically
- Seasonal trend & safety-stock recommendations

PHASE 1

01

MODULE

Core Setup

Stores, Users & Permissions

No dependencies — this is the foundation

What This Module Does

Manage multiple warehouses in one system

Staff logins for Admin (5 roles) , Accountant, Procurement, Sales, Inventory & Cashier roles

Control who can see pricing, purchasing, accounting & reports

PHASE 1

02

MODULE

Product & Inventory

One catalog, real-time stock

Depends on: Core Setup

What This Module Does

- Central catalog for all 3,000+ products (SKU, barcode, brand, category)
- Real-time stock levels across every warehouse
- Barcode scanning, plus ability to generate new barcodes
- Stock adjustments, transfers & physical stock counts
- Track damaged & returned goods, get low-stock alerts
- Allocation rules for a dedicated e-commerce warehouse, pulling from the main warehouse when needed

PHASE 1

03

MODULE

Retail POS

Point-of-sale for your store counters

Depends on: Core Setup, Product & Inventory

What This Module Does

- Fast billing at the counter with barcode scanning
- Sales, returns, exchanges, refunds & discounts
- Customer accounts & store credit
- Cashier login, shift closing & daily cash reconciliation
- Keeps working with no internet — syncs automatically once back online
- Returns feed the same invoice → adjustment → credit note → ledger workflow used across the platform

Purchasing & Vendors

From order to vendor bill

Depends on: Product & Inventory

What This Module Does

- Create & track purchase orders for all your vendors
- Record goods received against each order
- Vendor-specific pricing, payment terms & bills
- Purchase history & vendor performance reports
- Suggested reorder quantities based on stock & sales
- Purchase returns, shortages & damages, with vendor credit notes and payable adjustments

E-Commerce Hub

Shopify, WooCommerce, eBay, TikTok Shop & Whatnot

Depends on: Product & Inventory

What This Module Does

- One dashboard for products, orders & stock across every channel
- Real-time stock sync — stops overselling online
- Channel-specific pricing, all managed centrally
- Orders, returns, refunds & shipping status update automatically
- Full integration for all 5 channels: Shopify, WooCommerce, eBay, TikTok Shop & Whatnot
- Captures marketplace fees & shipping cost per order, feeding the profitability reporting in Module 7

Multi-Warehouse E-Commerce Fulfillment

Hot SKUs in a dedicated e-commerce warehouse — everything else pulled from the main warehouse

- Predefined allocation/fulfillment rules per SKU — you decide what lives in the dedicated e-commerce warehouse
- Real-time stock sync across both warehouses prevents overselling on any channel
- Works within the multi-warehouse inventory & real-time e-commerce sync already in scope (Modules 2 & 6) — this defines the allocation logic on top of it

Part of Product & Inventory (Module 2) + E-Commerce Hub (Module 6) — cost & timeline already included in those modules.

Reports & Dashboards

See the business at a glance

Depends on: Retail POS, Purchasing & Vendors, Wholesale & B2B Portal, E-Commerce Hub

What This Module Does

- Daily sales, retail vs wholesale, channel-wise & brand-wise views
- Fast-moving, slow-moving & dead-stock reports
- Inventory valuation, gross & net profit, cash flow
- One executive dashboard with the KPIs that matter most
- Net profit by marketplace & by order — sales minus discounts, refunds, marketplace fees, shipping & product cost

Marketplace Reconciliation & Profitability

One clear net-profit formula, applied consistently across every channel

Calculated per order, then rolled up per marketplace & payout period.

WHY THIS NEEDS ITS OWN DESIGN STEP

- Every marketplace calculates fees differently — Shopify, WooCommerce, eBay, TikTok Shop & Whatnot each have their own fee schedule & payout structure.
- During discovery, we map each channel's fee mechanism individually, then apply the same net-profit formula consistently across all of them in reporting.
- This gives you one number you can trust for comparing channel performance — not five different definitions of "profit."

Part of the Reports & Dashboards module (Module 7), with data supplied by the E-Commerce Hub (Module 6) — cost & timeline already included in those modules.

★ FLAGSHIP FEATURE

08

MODULE

Smart Demand Forecasting

AI-assisted purchase planning

Depends on: Product & Inventory, E-Commerce Hub

What This Module Does

- Learns from sales history to predict future demand
- Recommends what to reorder, how much & when
- Flags fast-moving, slow-moving & dead stock automatically
- Seasonal trend & safety-stock recommendations
- Replaces hours of manual Excel review every month

Accounting & Finance

Books that stay in sync with operations

Depends on: Retail POS, Purchasing & Vendors, Wholesale & B2B Portal, E-Commerce Hub

What This Module Does

- General ledger, accounts receivable & payable
- Profit & Loss and Balance Sheet, always up to date
- Bank reconciliation & sales tax
- Sales & purchases post automatically — no double entry
- Basic payroll entry to complete your P&L
- Post-dated check (PDC) tracking for customers & vendors, with clearance status & automatic reminders
- Credit notes & refunds from any channel post straight to the customer or vendor ledger

Post-Dated Checks (PDC) Management

Tracked on both sides — money coming in and money going out

Customer PDCs (Receivables)

- Check amount, clearance date & status recorded against each customer
- Reflected directly in the customer ledger, alongside cash & card payments
- Status flow: Pending → Due Soon → Cleared / Bounced
- Automatic reminders sent before the due date

Vendor PDCs (Payables)

- Company-issued post-dated checks recorded when issued to a vendor
- Clearance date & status tracked against the vendor ledger
- Same status flow & reminder logic, applied to outgoing checks
- Full visibility into upcoming payment obligations

Part of the Accounting & Finance module (Module 9) — cost & timeline already included there.

Returns, Refunds & Invoice Adjustments

One workflow, used everywhere — retail, wholesale, purchasing & e-commerce

Works in both directions

Customer returns (retail & wholesale) and vendor/purchase returns use the same underlying mechanism — only the ledger side differs.

Damaged & non-resellable stock

Flagged separately during the inventory adjustment step, so it's excluded from sellable stock without being lost from the records.

Daily invoicing & finalization

Daily sales are captured operationally as they happen, then consolidated into finalized invoices — exact cutoff rules confirmed during discovery.

Built into Retail POS, Purchasing & Vendors, Wholesale & Accounting — cost & timeline already included in those modules.

E-Commerce Integrations

All 5 channels — Shopify, WooCommerce, eBay, TikTok Shop & Whatnot — feasibility and dependencies

PLATFORM	STATUS	HOW IT CONNECTS	NEEDED FROM YOU
Shopify	Fully Supported	Direct integration via Shopify's Admin API (REST/GraphQL). Real-time product, inventory, pricing & order sync.	A custom app / access token generated from your Shopify Admin (Settings → Apps → Develop apps).
WooCommerce	Fully Supported	Direct integration via the WooCommerce REST API. Same real-time product, inventory & order sync as Shopify.	Site URL plus a REST API Consumer Key & Secret, generated in WooCommerce → Settings → Advanced → REST API.
eBay	Fully Supported	Direct integration via the eBay Sell API (Inventory, Fulfillment & Account APIs). Real-time listings, stock & order sync.	An eBay Developer account with a registered application, plus OAuth consent granted from your eBay seller account.
TikTok Shop	Possible, With Conditions	TikTok Shop has an official Partner API, but it is seller-gated — access requires your own Partner Center account and an approved integration app; it cannot read or write shops it isn't authorized for.	An active TikTok Shop Partner Center account (correct business region selected) with the integration app approved for your seller account.
Whatnot	Possible, With Conditions	Whatnot's seller API is newer and more limited than the others — livestream sales typically post as orders after the fact rather than syncing live stock during a stream.	A Whatnot seller account with API/webhook access enabled. If direct access is restricted, we'll bridge the gap with a scheduled order-import sync until full API access is available.

All 5 integrations depend on you granting API access on your side. Where an API is limited or seller-gated (TikTok Shop, Whatnot), we bridge the gap with a scheduled import/export sync until full access is approved.

Implementation Roadmap

Your path from kickoff to a fully connected platform

PHASE 1

Live in-store & ready to sell

- 1 Core Setup
- 2 Product & Inventory
- 3 Retail POS
- 4 Purchasing & Vendors

PHASE 2

Expand into wholesale, online channels & reporting

- 5 Wholesale & B2B Portal
- 6 E-Commerce Hub
- 7 Reports & Dashboards

PHASE 3

Advanced intelligence & finance — flagship forecasting included

- ★ Smart Demand Forecasting (flagship)
- 9 Accounting & Finance

Nine modules, delivered in three phases — with Smart Demand Forecasting flagged as the priority feature within Phase 3.

Terms & Conditions

Commercial terms governing this proposal

1**Client-Provided Requirements**

All requirements, data, credentials & access needed for the project — including API access to legacy/existing systems and any other third-party platforms — are to be provided by the client in a timely manner.

2**Taxes**

All costs quoted in this proposal are exclusive of applicable taxes.

3**Delay Charges**

If the project extends beyond the agreed tenure due to delays on the client's side, a charge of 5% of the total project cost will apply per month of delay.

4**Project Guidelines**

The client is responsible for providing the business & process guidelines needed to correctly implement the solution.

5**Maintenance & Support**

Post-implementation maintenance & support costs are not included in this proposal and will be shared separately.

—These terms apply alongside the assumptions on the Investment Overview page and will be reflected in the final signed agreement.

Thank You

We look forward to building this with you — one connected platform, from your first sale to your last.
